

April 2022 – Important Information about your Drinking Water (Updated September 2022):

As required by the New Jersey Department of Environmental Protection (NJDEP), we are providing this update. The test result received on August 16, 2022 for PFOA at the Beverly Road Water Treatment Plant was 18 parts per trillion (PPT). Since exceeding the NJDEP Maximum Contaminant Level (MCL) for PFOA with the 1st quarter 2022 result, the running annual average for PFOA has remained consistent. T&M Associates is currently preparing plans and specifications for an ion exchange treatment system that will bring the plant back into full compliance. Additional updates will be posted quarterly. For more information, please contact Scott Hatfield, Township Engineer at 609-239-5836 or shatfield@twp.burlington.nj.us.
